

What good looks like

Installed correctly, Gutter Trim Internal Corners deliver a smart finish and long-term protection from the elements.

Integra Trim components are designed and manufactured for quick and easy installation.

In this guide, you'll learn how to prepare your project site and correctly install each Integra Trim component.

How to install Integra Trim Gutter Trim Internal Corners

Follow the steps in this guide to correctly use corner components to join two lengths of Integra Trim Gutter Trim where they meet on an internal right angle.

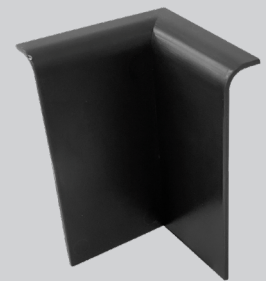

Preparing for flat roof success

Ensure the Integra Trim Gutter Trim Internal Corner components to be installed are clean, dry and free from dust and contaminants. Make sure to have the correct (and required quantities of) materials and tools, as listed below.

Materials required

- Integra Trim Gutter Trim Internal Corners
- Superglue
- uPVC superglue activator

No tools required

Top Tips...

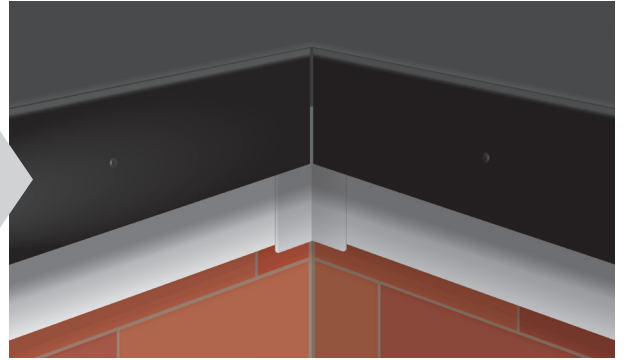

“Make sure to leave a 4mm gap between the two lengths of Gutter Trim to be joined - this allows for any expansion of the lengths of Gutter Trim.”

Step by step instructions to install Gutter Trim Internal Corners

Step 1

Create an effective corner (ready for Gutter Trim Internal Corners to be fitted) by butt-joining two lengths of Integra Trim Gutter Trim where they meet at an internal right angle.

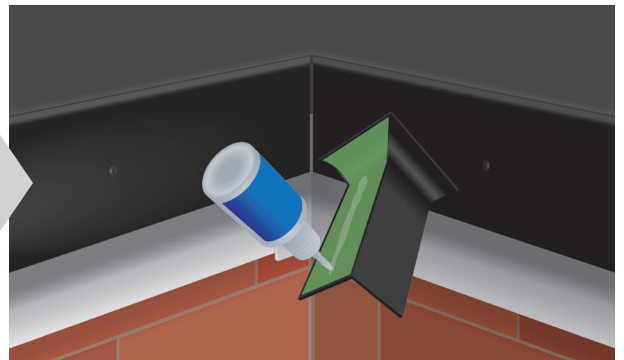

Make sure to leave an 4mm expansion gap.

Step 2

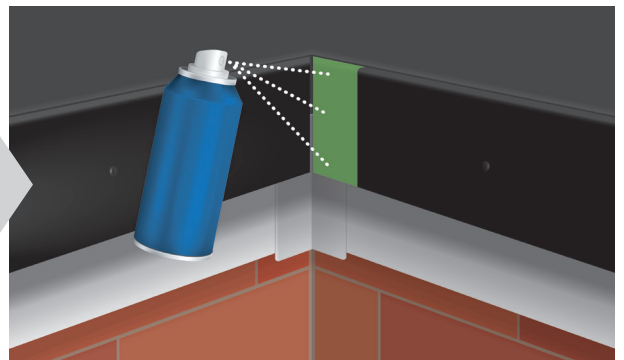

Apply superglue to ONE inside edge of the Gutter Trim Internal Corner component.

(Only one side is superglued to allow for any expansion of the joined lengths of Raised Kerb Trim.)

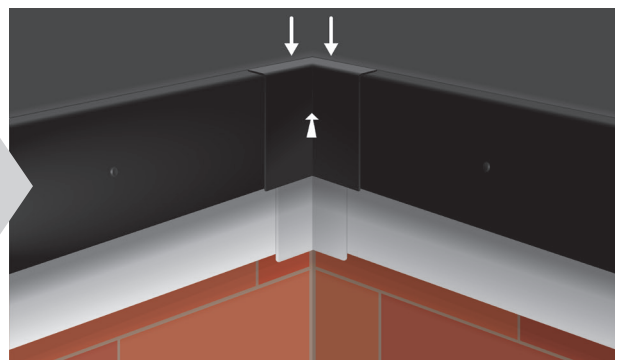

Step 3

Apply uPVC superglue activator to the Gutter Trim corner area where the superglued inside edge of the Internal Corner component is to be affixed.

Step 4

Firmly press the Internal Corner component down and into the Gutter Trim butt-joined corner and hold in place until adhesion is solid.
